React Intern Assignment

Join us in building the next generation of AI-powered solutions— designed to scale impact, spark innovation, and move the world forward.

1. Goal

Create a **static, front-end-only** React prototype that visually matches the attached screenshot of the product's spreadsheet view.

2. Core Criteria (IMPORTANT)

Build a pixel perfect experience as per Figma (including the actual spreadsheet experience) in React-

Figma URL:
https://www.figma.com/design/3nywpu5sz45RrCmwe68QZP/Intern-Design-Assigment?node-id=2-2535&t=DJGGMt8I4fiZjoIB-1

3. Tech Stack

- **React 18** (Vite or CRA—your choice)

- **TypeScript** (strict mode)

- **Tailwind CSS** for utility styling (already used across Gob)

- **react-table** (or ⚡ your own minimal table component) for the grid

- No state management library needed—local component state is fine.

5. Acceptance Criteria

1. **Pixel-close layout** to the Figma.

2. Google Sheet/Excel like spread sheet experience

3. All buttons/tabs change state or log to console—no dead UI.

4. Code passes `npm run lint` (ESLint + Prettier) and `npm run type-check`.

5. Clean commit history with meaningful messages.

6. Stretch (optional, only if time permits)

- Keyboard navigation within the grid (arrow keys).

- Column resize / hide toggles.

7. Submission

- Live URL to access the built out product
- Github
- Include a short `README.md` explaining setup & any trade-offs.

Good luck and have fun 🐙
